

REAL ESTATE

LEAD MAGNET AUTOMATION SYSTEM

Complete n8n Implementation Brief, Launch SOP and Handover Checklist

01 Capture Assessment form and source tracking	02 Qualify System score plus sales grade	03 Convert Reports, Loom, calls and follow-up
---	---	--

Primary commercial goal

Launch a professional real estate lead magnet that generates qualified conversations and supports Magnetar Solution.

Prepared for the n8n Automation Dev (Talha/Team)

Version 1.0 | July 2026 | Internal Use

1. Assignment Summary

You are responsible for building, testing, launching and documenting the Real Estate Lead Magnet Automation System. The system must capture prospects, evaluate their current lead process, identify high-value opportunities, send useful results, notify the sales owner and ensure no qualified lead is forgotten.

Important

This is not simply a form automation. It is a revenue system. Every technical decision must support faster qualification, better follow-up and more booked sales calls.

1.1 Required business outcome

- Attract owners and decision-makers from real estate brokerages, property management companies, mortgage businesses and similar service companies.
- Collect enough information to diagnose their lead-handling process without making the assessment feel difficult.
- Separate system weakness from buyer quality by calculating two different scores.
- Deliver a useful result immediately and create a clear next step for qualified prospects.
- Route high-quality prospects to Sharjeel/Sadam for personal review, Loom audit, discovery call and proposal.
- Track the full funnel from source to signed revenue.

1.2 Definition of done

- ☐ The public assessment is live and works on mobile and desktop.
- ☐ Every valid submission is stored once in the master lead database.
- ☐ System Health Score and Qualification Score are calculated correctly.
- ☐ A, B and C leads are routed to the correct path.
- ☐ The prospect receives a branded result email.
- ☐ A-level leads trigger an immediate internal alert and manual-review task.
- ☐ Follow-ups stop when a prospect replies, books, unsubscribes or is marked closed.
- ☐ Management can see daily volume, qualified leads, calls, proposals and revenue.
- ☐ Errors, duplicate submissions and failed messages are logged.
- ☐ A handover document and Loom walkthrough are completed.

1.3 Your reporting line

Item	Rule
Project owner	Sharjeel/Sadam - handles offer, sales calls, personalized Looms and closing.
Automation owner	Talha or team - build, test, monitor and document the system.
Sales team	Research, LinkedIn/Facebook conversations, response handling and CRM updates.
Daily update	Send progress, blockers, tests completed, metrics and next action before end of workday.

2. Offer and Target Audience

2.1 Public offer

Lead magnet name

Free Real Estate Lead Conversion & Automation Audit

Public promise:

Discover where a real estate business may be losing leads because of slow response, inconsistent follow-up, disconnected systems, missed calls and manual work.

2.2 Primary target businesses

Priority	Business type	Typical problems
1	Property management companies	Owner leads, tenant inquiries, maintenance requests, onboarding, reporting and disconnected property systems.
2	Real estate brokerages	Website/portal leads, assignment, agent follow-up, appointment booking and pipeline visibility.
3	Mortgage brokerages	Lead capture, document collection, reminders, pipeline updates and borrower follow-up.
4	Real estate investment companies	Seller lead qualification, acquisitions follow-up, appointments and deal reporting.
5	Real estate marketing agencies	Client onboarding, lead delivery, campaign reporting and CRM integration.

2.3 Ideal decision-makers

- Founder or owner
- Managing broker
- COO or Operations Director
- Sales Director
- Marketing Director
- Head of Lead Generation
- Property Management Director

2.4 Lead quality indicators

- Five or more team members.
- More than 20-30 inquiries per month.
- Leads arrive from several channels.
- There is a CRM, property system or spreadsheet process.
- The team depends on manual assignment or follow-up.

- The prospect wants improvement within 90 days.
- The business can potentially buy a USD 3,000-15,000 implementation.

2.5 Paid services behind the lead magnet

Package	Core scope	Indicative value
Lead Follow-Up Foundation	Centralized capture, CRM connection, acknowledgement, assignment and basic follow-up.	USD 2,500-4,000
Real Estate Lead Conversion System	Multiple sources, qualification, CRM, SMS/email, booking and reporting.	USD 5,000-8,000
Complete Real Estate Operations System	Lead management, onboarding, documents, AI, dashboards, portals and ongoing automation.	USD 8,000-15,000+

3. System Architecture

Build the minimum reliable version first. Keep the public experience simple, while the backend remains structured enough for future scaling.

Layer	Recommended component	Purpose
Traffic	LinkedIn, Facebook, direct messages and cold outreach	Attract relevant decision-makers.
Landing page	Simple branded page or Tally landing form	Explain the audit and increase form completion.
Assessment	Tally/Typeform-style form; Google Forms fallback	Collect business and process information.
Automation	n8n	Validate, score, route, email, alert, follow up and report.
Lead database	Google Sheets for MVP; Airtable/HubSpot/GHL optional	Single source of truth for all prospects.
Email	Gmail/Google Workspace or approved SMTP	Send result and follow-up messages.
Booking	Calendly or Google Calendar appointment scheduling	Convert qualified interest into calls.
Internal alert	Email, Slack, Telegram or WhatsApp-approved channel	Notify management about A-level leads.
Analytics	Google Sheets dashboard or Looker Studio	Measure funnel and revenue.
Personal review	Loom	Demonstrate expertise for qualified leads.

3.1 Data flow

Step	Event	Required system behavior
1	Prospect opens assessment	UTM/source information is captured.
2	Prospect submits form	Webhook or sheet trigger sends structured data to n8n.
3	n8n validates and normalizes	Required fields, email, source and labels are checked.
4	Deduplication runs	Existing contact is updated instead of creating duplicates.
5	Two scores are calculated	System Health Score and Qualification Score.
6	Lead is graded	A, B or C based on qualification, not system weakness alone.
7	Lead is stored	Master lead record plus activity log entry.
8	Prospect receives result	Personalized summary and next step.
9	Internal action is created	A-level lead alert, research task and Loom deadline.
10	Follow-up sequence begins	Stops immediately on reply, booking, unsubscribe or closed status.
11	Management dashboard updates	Source, grade, calls, proposals, revenue and conversion.

3.2 Architecture rule

Single source of truth

The master lead database must control the current status. n8n should never rely only on execution history to know whether a lead is active, booked, unsubscribed or closed.

4. Build Plan and Order of Work

Do not begin with AI report generation. Build and test the deterministic data path first.

Phase	Tasks	Exit condition
Phase 1 - Foundation	Create form, database tabs, field names, config values and booking page.	A manual submission appears correctly in the database.
Phase 2 - Core intake	Build validation, normalization, deduplication, scoring, grade and storage.	Test submissions produce correct scores and grades.
Phase 3 - Results	Create branded result email and internal A-lead alert.	Prospect and owner receive correct messages.
Phase 4 - Follow-up	Create due-lead scheduler, stop conditions and reply/booking updates.	No follow-up is sent after a stop event.

Phase	Tasks	Exit condition
Phase 5 - Reporting	Create activity log, dashboard and daily management summary.	Management sees accurate daily and pipeline totals.
Phase 6 - Production QA	Run all test cases, fix errors, document credentials and record Loom.	Acceptance checklist is signed off.
Phase 7 - Enhancement	AI summaries, PDF report, CRM migration, advanced attribution and ads.	Only after MVP has real submissions.

4.1 Priority order for today

1. Create the form and connected data store.
2. Create the master lead sheet and all required columns.
3. Build Workflow 01: Intake, scoring, grading and storage.
4. Build Workflow 02: Result email and internal alert.
5. Complete test submissions for A, B and C leads.
6. Publish the form link only after tests pass.
7. Build follow-up and dashboard immediately after launch.

4.2 Configuration sheet

Create a Config tab. Do not hard-code changing values in multiple n8n nodes.

Key	Example value	Usage
BOOKING_URL	https://calendly.com/...	All call-to-action buttons and messages.
OWNER_EMAIL	owner@company.com	A-level alerts and daily summary.
COMPANY_NAME	Magnetar Solutions	Email branding.
A_GRADE_MIN	70	Qualification threshold.
B_GRADE_MIN	45	Qualification threshold.
FOLLOWUP_1_DAYS	3	First reminder.
FOLLOWUP_2_DAYS	7	Second reminder.
FOLLOWUP_3_DAYS	12	Final reminder.
LOOM_SLA_HOURS	24	Manual review deadline.
DEFAULT_TIMEZONE	America/New_York or lead-derived	Scheduling when prospect timezone is unknown.
SYSTEM_VERSION	1.0	Audit and troubleshooting.

5. Assessment Form Specification

Use the exact questions below for the first version. Keep wording business-focused and non-technical.

#	Question/field	Type	Options	Rule
1	Business type	Single select	Real estate brokerage; Property management; Mortgage brokerage; Real estate investment; Real estate marketing agency; Other	Required
2	Company name	Short text	-	Required
3	Website	URL/text	-	Required
4	Team size	Single select	Just me; 2-5; 6-15; 16-50; 50+	Required
5	Monthly new leads	Single select	<10; 10-30; 31-75; 76-200; 200+; Not sure	Required
6	Lead sources	Multi-select	Website; Meta Ads; Google Ads; Portals; Calls; WhatsApp; Email; Referrals; Social; Other	Required
7	Where leads are stored	Single select	CRM; Property software; Sheets; Email; Different systems; Not sure	Required
8	Are all leads centralized?	Single select	Yes; Partially; No; Not sure	Required
9	First response time	Single select	Immediate; 5-15 min; <1 hour; Same day; >1 day; Depends on staff	Required
10	Lead assignment	Single select	Automatic; Manager manually; Agents select; Email/group; No formal process	Required
11	Follow-up management	Single select	Fully automated; CRM reminders; Personal calendars; Sheets; Memory; No consistent process	Required
12	Missed-call process	Single select	Auto SMS; Task created; CRM log; Manual check; No process; Not sure	Required
13	Management visibility	Single select	Live dashboard; Partial; Manual reports; No; Not sure	Required
14	Main difficulty	Single select	Response; Disconnected leads; Follow-up; Missed calls; CRM updates; Qualification; Booking; Reporting; Onboarding; Other	Required
15	Improvement timeline	Single select	Immediately; 30 days; 90 days; Later this year; Researching	Required
16	Personalized review?	Single select	Yes; Maybe; No	Required
17	Name	Short text	-	Required
18	Work email	Email	-	Required
19	Phone/WhatsApp	Short text	-	Optional

#	Question/field	Type	Options	Rule
20	Consent/communication	Checkbox	I agree to receive my result and relevant follow-up about this assessment.	Required

5.1 Hidden tracking fields

- utm_source
- utm_medium
- utm_campaign
- utm_content
- referrer_url
- landing_page_url
- form_version
- submission_timestamp
- prospect_timezone when available

5.2 Form confirmation message

Confirmation copy

Thank you. Your assessment has been received. We are calculating your result and will send your recommendations to the email provided. Qualifying businesses may also receive a short personalized process review.

5.3 Form implementation options

Option	Use when	Trigger method
Tally or similar webhook form	Preferred when the account supports a direct webhook.	Webhook node in n8n.
Google Forms	Fastest when the team already works in Google Workspace.	Google Sheets Trigger/polling, or Apps Script POST to n8n webhook.
Custom landing page	Use after validation or for paid traffic.	Frontend POST to secured n8n webhook/API endpoint.

6. Master Lead Database

For the MVP, use one Google Spreadsheet with controlled tabs. Never let team members create separate unmanaged lead sheets.

6.1 Required tabs

Tab	Purpose
Leads	One current record per prospect/company.

Tab	Purpose
Activity_Log	Append-only history of submissions, emails, replies, bookings, calls and status changes.
Config	Thresholds, URLs, sender settings and system values.
Email_Templates	Approved subject lines and message bodies.
Campaigns	Source/campaign names, owners and status.
Dashboard	Management metrics and funnel view.
Errors	Failed executions, invalid data and retry status.
Suppression_List	Unsubscribed, bounced, blocked and do-not-contact records.

6.2 Leads tab columns

Column	Meaning
lead_id	Stable UUID generated once.
created_at_utc	First creation time in UTC.
updated_at_utc	Latest change time in UTC.
name	Prospect name.
work_email	Normalized lowercase email.
phone	Optional normalized number.
company_name	Business name.
website	Normalized website/domain.
business_type	Selected real estate category.
team_size	Raw selected label.
monthly_leads	Raw selected label.
lead_sources	Comma-separated labels or JSON array.
lead_storage	CRM/property software/sheets/email/etc.
all_leads_centralized	Yes/Partially/No/Not sure.
response_time	Selected label.
assignment_method	Selected label.
followup_method	Selected label.
missed_call_process	Selected label.
management_visibility	Selected label.
main_problem	Selected label.
improvement_timeline	Selected label.
personal_review_requested	Yes/Maybe/No.
system_health_score	0-100.
qualification_score	0-100.

Column	Meaning
lead_grade	A/B/C.
weakest_categories	Top three system gaps.
recommended_offer	Foundation/Conversion/Complete.
estimated_value	Internal range.
source	LinkedIn/Facebook/cold email/referral/etc.
campaign	Campaign identifier.
status	Current CRM stage.
assigned_owner	Responsible person.
last_activity_at_utc	Latest event time.
next_action	Required next action.
next_action_at_utc	Deadline.
followup_step	0-3.
replied	TRUE/FALSE.
reply_type	Positive/question/not now/negative/referral/unsubscribe.
booking_status	Not booked/booked/completed/no-show/cancelled.
proposal_value	Numeric.
deal_status	Open/won/lost.
won_revenue	Numeric.
consent_status	Granted/withdrawn.
suppressed	TRUE/FALSE.

6.3 CRM status values

- New submission
- Result sent
- A-level review required
- Loom prepared
- Contacted
- Replied
- Call booked
- Call completed
- Proposal required
- Proposal sent
- Negotiation
- Won
- Lost
- Nurture
- Unsubscribed
- Invalid

7. Scoring Model

Critical rule

System Health Score measures how strong the prospect's process is. Qualification Score measures how commercially valuable and ready the prospect may be. Never use one score for both purposes.

7.1 System Health Score - 100 points

Category	Max	Scoring
Lead centralization	15	Yes 15; Partially 8; No 0; Not sure 3
Lead storage quality	15	CRM 15; Property software 13; Sheets 7; Email 3; Different systems 0; Not sure 2
Response speed	15	Immediate 15; 5-15 min 13; <1 hour 9; Same day 5; >1 day 0; Depends 3
Assignment process	15	Automatic 15; Manager manually 8; Agents select 5; Email/group 3; No process 0
Follow-up process	15	Fully automated 15; CRM reminders 11; Personal calendar 7; Sheets 4; Memory 1; None 0
Missed-call handling	10	Auto SMS 10; Task 8; CRM 6; Manual check 3; None 0; Not sure 1
Management visibility	15	Live dashboard 15; Partial 10; Manual reports 5; No 0; Not sure 2

7.2 Qualification Score - 100 points

Category	Max	Scoring
Team size	20	Just me 2; 2-5 = 8; 6-15 = 14; 16-50 = 18; 50+ = 20
Monthly leads	25	<10 = 2; 10-30 = 8; 31-75 = 15; 76-200 = 21; 200+ = 25; Not sure = 5
Multiple lead sources	15	1 source = 3; 2 = 7; 3 = 11; 4+ = 15
Improvement timeline	20	Immediately 20; 30 days 17; 90 days 12; Later this year 6; Researching 2
Personal review intent	10	Yes 10; Maybe 5; No 0
Business-fit bonus	10	Property management/brokerage/mortgage/investment = 10; agency = 8; other = 3

7.3 Grade rules

Grade	Rule	Action
A	Qualification Score ≥ 70	Immediate alert, research, personalized Loom, same-day contact and call invitation.
B	Qualification Score 45-69	Send result, useful recommendation and scheduled follow-up.
C	Qualification Score < 45	Send automated educational result and light nurture only.

7.4 Recommended offer logic

Condition	Recommended offer
Qualification ≥ 75 and system health ≤ 55	Complete Real Estate Operations System
Qualification ≥ 60 and system health ≤ 70	Real Estate Lead Conversion System
Qualification < 60 or only one major gap	Lead Follow-Up Foundation
Very low qualification	Educational nurture; no custom proposal yet

7.5 n8n Code node example

```
const input = $json;
const n = (v) => String(v ?? '').trim().toLowerCase();
const pick = (map, value, fallback = 0) => map[n(value)] ?? fallback;

const system = {
  centralization: pick({yes:15, partially:8, no:0, 'not sure':3}, input.all_leads_centralized),
  storage: pick({crm:15, 'property management software':13, 'google sheets or excel':7,
    'email inbox':3, 'different systems':0, 'not sure':2}, input.lead_storage),
  response: pick({immediately:15, 'within 5-15 minutes':13, 'within one hour':9,
    'within the same day':5, 'after one day':0, 'it depends on staff availability':3}, input.response_time),
  assignment: pick({automatically:15, 'manually by a manager':8, 'agents select leads themselves':5,
    'through email or group messages':3, 'there is no formal assignment process':0}, input.assignment_method),
  followup: pick({'fully automated':15, 'crm reminders':11, 'personal calendars or reminders':7,
    spreadsheets:4, 'team members remember manually':1, 'there is no consistent follow-up process':0},
input.followup_method),
  missedCall: pick({'an automatic sms is sent':10, 'a task is created for the team':8,
    'the call appears in the crm':6, 'someone manually checks missed calls':3,
    'there is no consistent process':0, 'not sure':1}, input.missed_call_process),
  visibility: pick({'yes, through a live dashboard':15, partially:10,
    'reports are created manually':5, no:0, 'not sure':2}, input.management_visibility),
};

const sources = Array.isArray(input.lead_sources)
  ? input.lead_sources
  : String(input.lead_sources ?? '').split(',').map(s => s.trim()).filter(Boolean);

const qualification = {
  team: pick({'just me':2, '2-5 people':8, '6-15 people':14, '16-50 people':18, 'more than 50 people':20},
input.team_size),
  volume: pick({'fewer than 10':2, '10-30':8, '31-75':15, '76-200':21, 'more than 200':25, 'not sure':5},
input.monthly_leads),
  sources: sources.length >= 4 ? 15 : sources.length === 3 ? 11 : sources.length === 2 ? 7 : 3,
  timeline: pick({immediately:20, 'within 30 days':17, 'within 90 days':12, 'later this year':6, 'i am only
researching':2}, input.improvement_timeline),
  review: pick({yes:10, maybe:5, no:0}, input.personal_review_requested),
  fit: pick({'property management company':10, 'real estate brokerage':10, 'mortgage brokerage':10,
    'real estate investment company':10, 'real estate marketing agency':8, other:3}, input.business_type),
};

const systemHealthScore = Object.values(system).reduce((a,b) => a+b, 0);
const qualificationScore = Object.values(qualification).reduce((a,b) => a+b, 0);
const grade = qualificationScore >= 70 ? 'A' : qualificationScore >= 45 ? 'B' : 'C';

const categoryLabels = {
  centralization: 'Lead centralization', storage: 'Lead storage', response: 'Response speed',
  assignment: 'Lead assignment', followup: 'Follow-up', missedCall: 'Missed calls', visibility: 'Management visibility'
};
const weakest = Object.entries(system)
  .sort((a,b) => a[1]-b[1])
  .slice(0,3)
  .map(([key,score]) => ({ category: categoryLabels[key], score }));

const recommendedOffer = qualificationScore >= 75 && systemHealthScore <= 55
  ? 'Complete Real Estate Operations System'
  : qualificationScore >= 60 && systemHealthScore <= 40
  ? 'Real Estate Lead Conversion System'
  : 'Lead Follow-Up Foundation';

return [{ json: {
  ...input,
  system_health_score: systemHealthScore,
  qualification_score: qualificationScore,
  lead_grade: grade,
  weakest_categories: weakest,
  recommended_offer: recommendedOffer,
  scoring_version: '1.0'
}}];
```

8. n8n Workflow Specifications

Use clear workflow names, consistent node names and error workflows. Every workflow must write important business events to Activity_Log.

8.1 WF-01 - Lead Magnet Intake and Scoring

Purpose: Receive a submission, validate it, calculate scores, deduplicate, store the lead and route the correct next action.

Order	Node name	Required behavior
1	Form Webhook / Google Sheets Trigger	Receive all public and hidden fields. Use production webhook after testing.
2	Set - Normalize Input	Trim names, lowercase email, normalize URL, convert multi-select to array, create received_at_utc.
3	IF - Required Fields Valid?	Reject missing name, work email, company and consent.
4	Code - Validate Email/Domain	Basic syntax validation; flag free email domains for review, but do not automatically reject all.
5	Lookup - Suppression List	Stop if unsubscribed, blocked or previous hard bounce.
6	Lookup - Existing Lead	Match by normalized email first, then company domain.
7	Code - Calculate Scores	Calculate system health, qualification, grade, weakest categories and offer.
8	Code - Build Lead Record	Generate UUID only for new lead. Preserve original created_at_utc.
9	Upsert - Leads	Update existing record or insert once.
10	Append - Activity Log	Event type = assessment_submitted. Store workflow execution id.
11	Switch - Grade	A, B or C route.
12	Execute Workflow - Result Delivery	Send appropriate result.
13	Execute Workflow - A Lead Alert	Only for grade A.
14	Set - Next Action	Create next action and due date.
15	Respond to Webhook	Return success without exposing internal scores unless result page needs them.

8.2 WF-02 - Result Email Delivery

Purpose: Send a useful result that feels personalized but remains factual.

- Load lead record and approved template.
- Select result label from System Health Score: 0-39 Critical; 40-59 Major Opportunity; 60-74 Functional but Inconsistent; 75-89 Strong with Gaps; 90-100 Highly Optimized.
- Insert top three weakest categories and recommended next steps.
- For A leads, include an invitation to receive a personalized review and call.

- For B leads, include one practical recommendation and a soft call invitation.
- For C leads, provide educational value without promising a custom Loom.
- Record message id, subject, sent time and delivery status.

8.3 WF-03 - A-Level Lead Alert and Task

Node	Action
Lookup Lead	Load complete record, source, scores and main problem.
Create Summary	Build concise internal summary with company, website, lead volume, grade, system gaps and timeline.
Send Owner Alert	Email/Slack/Telegram/approved channel with urgent label.
Create Research Task	Next action: review website and prepare personalized Loom.
Set SLA	Due within configured LOOM_SLA_HOURS.
Append Activity	a_lead_alert_sent.

8.4 WF-04 - Follow-Up Scheduler

Trigger: Schedule daily or several times per day. Query only leads whose next_action_at_utc is due.

- Filter out suppressed, invalid, won, lost and unsubscribed leads.
- Stop when replied = TRUE unless reply type is out_of_office and a safe reschedule date exists.
- Stop when booking_status is booked, completed or cancelled pending manual review.
- Stop when followup_step is greater than the approved maximum.
- Send the template for the current step.
- Increment followup_step only after successful send.
- Update next_action_at_utc using business-day logic where practical.
- Log failures and retry only safe/idempotent operations.

8.5 WF-05 - Booking Sync

- Receive Calendly webhook or Google Calendar event signal.
- Match by invitee email.
- Set booking_status = booked and status = Call booked.
- Store meeting start in UTC and prospect-local display time when timezone is available.
- Set next action for call preparation.
- Stop active email sequence.
- Notify owner and append booking_created activity.

8.6 WF-06 - Reply Detection and Classification

- Use Gmail trigger/search on the dedicated inbox or reply-to address.
- Match reply to lead by sender email and, where available, original message/thread id.
- Classify: positive, question, not now, negative, referral, unsubscribe, out of office or unknown.
- Never auto-send a sales answer for positive or complex replies without human review.
- Immediately suppress on unsubscribe.
- Set next action for sales owner on positive, question or referral replies.

- Store a safe excerpt and Gmail thread link, not unnecessary sensitive content.

8.7 WF-07 - Daily Management Summary

Schedule for the end of the team workday. Use the company timezone for reporting, while storing canonical timestamps in UTC.

- New assessments today
- A/B/C leads
- Result emails sent/failed
- Positive replies
- Calls booked
- Looms pending/overdue
- Proposals sent and value
- Won revenue
- Leads with overdue next action
- Errors requiring attention

8.8 WF-99 - Error Handler

- Use n8n Error Trigger for production workflows.
- Write workflow name, execution id, lead id/email when safe, node, error summary, timestamp and retry status to Errors.
- Notify the automation owner for critical intake, scoring or email failures.
- Avoid sending duplicate prospect messages during retries.
- Mark resolved only after a verified successful rerun.

9. Email and Message Templates

9.1 Result email - A lead

Subject

{{Company Name}} - your lead conversion audit result

Hi {{First Name}},

Thank you for completing the Real Estate Lead Conversion & Automation Audit.

Your current System Health Score is {{System Health Score}}/100. Based on your responses, the strongest improvement opportunities are:

1. {{Weakness 1}}
2. {{Weakness 2}}
3. {{Weakness 3}}

The highest-priority issue appears to be {{Main Problem}}. A more reliable process could connect your incoming lead sources, centralize the CRM record, assign the right team member, trigger immediate acknowledgement and keep follow-up visible to management.

Your business also qualifies for a short personalized process review. Our team will review {{Company Name}} and may

send a brief Loom showing the first workflow we would improve.

You can also book a 20-minute review here: {{Booking URL}}

Best,
 {{Sender Name}}
 Magnetar Solutions

9.2 Result email - B lead

Subject

Your real estate lead process score and next steps

Hi {{First Name}},

Thank you for completing the assessment. Your System Health Score is {{System Health Score}}/100.

The main opportunity we identified is {{Weakness 1}}. A practical first improvement would be {{Recommendation 1}}. This can reduce manual handling and make it easier to see which leads still need attention.

If improving this process becomes a priority, you can book a short review here: {{Booking URL}}.

Best,
 {{Sender Name}}

9.3 Result email - C lead

Subject

Your Real Estate Lead Conversion Audit result

Hi {{First Name}},

Thank you for completing the assessment. Your current System Health Score is {{System Health Score}}/100.

The first area to review is {{Weakness 1}}. Start by documenting where every lead arrives, who owns the first response and how the next follow-up is recorded. This creates the foundation for future automation.

We will continue sharing practical guidance on improving real estate lead operations.

Best,
 {{Sender Name}}

9.4 Internal A-level alert

NEW A-LEVEL REAL ESTATE LEAD

Name: {{Name}}
 Company: {{Company}}
 Website: {{Website}}
 Business type: {{Business Type}}
 Team size: {{Team Size}}
 Monthly leads: {{Monthly Leads}}
 Qualification score: {{Qualification Score}}/100
 System health: {{System Health Score}}/100

Main problem: {{Main Problem}}

Top gaps: {{Weaknesses}}

Timeline: {{Timeline}}

Source: {{Source/Campaign}}

Required action: Review website, identify one specific process problem, prepare Loom and contact by {{Due Time}}.

Lead record: {{CRM Link}}

9.5 Follow-up sequence

Step	Timing	Template
1	3 business days after result	Hi {{First Name}}, I wanted to follow up on your audit result. The main opportunity we identified was {{Weakness 1}}. Is that process currently handled through your CRM, or does part of it remain manual?
2	7 business days after result	One practical approach would be to connect {{Relevant Source}} with {{Current System}} so assignment and follow-up happen consistently. I can outline the workflow if this is currently relevant.
3	12 business days after result	I will close the loop after this. Should I send a short workflow outline for {{Main Problem}}, or is improving this process not a priority right now?

9.6 Stop conditions

- ☐ Any unsubscribe request.
- ☐ Hard bounce or invalid address.
- ☐ Positive or substantive reply requiring human handling.
- ☐ Call booked.
- ☐ Lead manually marked lost, won or do not contact.
- ☐ Maximum follow-up step reached.
- ☐ Company/domain added to suppression list.

10. Optional AI Report Generation

Do not enable AI until deterministic scoring and templates are working. AI may summarize verified answers, but it must not invent internal systems, revenue, problems or outcomes.

10.1 Approved AI input

- Form answers
- Calculated scores
- Weakest categories
- Verified website notes added by a human or trusted extraction step
- Approved service descriptions
- Approved recommendation library

10.2 Required JSON output

```
{

10.3 Prompt rules

- Use only supplied facts.
- Phrase uncertain internal-process assumptions as questions.
- Do not claim the company is losing revenue unless evidence is supplied.
- Do not mention n8n, APIs or webhooks unless the prospect asked for technical detail.
- Do not promise guaranteed results.
- Return strict JSON only.
- If data is insufficient, add a confidence note instead of guessing.

10.4 Deterministic fallback

Fallback behavior

If the AI call fails, times out or returns invalid JSON, send the approved deterministic result template. Lead delivery must never depend entirely on the AI node.

10.5 Recommendation library

Weak category	Safe recommendation
Lead centralization	Route website, advertising, portal and call leads into one controlled lead record.
Response speed	Send immediate acknowledgement and create a timed assignment/escalation process.
Lead assignment	Apply automatic routing by location, service, availability or round-robin rules.
Follow-up	Create a consistent multi-step sequence with tasks, SMS/email and stop conditions.
Missed calls	Trigger a compliant text-back or callback task and record it against the lead.
Management visibility	Create a dashboard for response, contact, appointment, conversion and lost reasons.
Lead storage	Remove duplicate entry by connecting forms and channels to the primary CRM.

11. Dashboard and Management Reporting

11.1 Executive dashboard metrics

Metric	Definition
Assessment visitors	Landing-page sessions where available.
Assessment submissions	Valid completed submissions.
Completion rate	Submissions / assessment starts or visitors.
A/B/C leads	Counts by qualification grade.
Qualified lead rate	A leads / valid submissions.
Result delivery rate	Successfully sent result emails / valid submissions.
Reply rate	Unique replies / delivered results.
Positive reply rate	Positive replies / delivered results.
Call booking rate	Calls booked / valid submissions and / A leads.
Proposal rate	Proposals / completed calls.
Close rate	Won deals / proposals and / completed calls.
Pipeline value	Sum of open proposal value.
Won revenue	Signed/confirmed revenue from this funnel.
Source ROI	Revenue and qualified leads by LinkedIn, Facebook, cold email, referral and campaign.

11.2 Daily owner summary format

Date: {{Date}}

New submissions: {{Count}}

A leads: {{Count}} | B leads: {{Count}} | C leads: {{Count}}

Positive replies: {{Count}}

Calls booked: {{Count}}

Loom reviews pending: {{Count}}

Overdue next actions: {{Count}}

Proposals sent today: {{Count}} | Value: {{Amount}}

Won revenue this month: {{Amount}} / USD 10,000 target

Errors requiring attention: {{Count}}

Top-performing source: {{Source}}

Most common system weakness: {{Weakness}}

Required management actions: {{Actions}}

11.3 Team reporting rules

- No lead may remain without an owner, status and next-action date.
- A lead must be reviewed by the sales owner on the same workday where practical.
- Every sent email, reply, call, Loom, proposal and status change must create an activity event.
- Pipeline value must come from actual proposal records, not estimates typed casually.

- Won revenue must only be counted after commercial confirmation according to management policy.

11.4 Daily automation-owner update

Copy this format

Completed today:

- ...

Tested:

- ...

Production metrics:

- Submissions ... | A leads ... | Emails failed ...

Blockers/risks:

- ...

Tomorrow's first action:

- ...

Links:

- n8n workflow ...

- Form ...

12. Testing and Quality Assurance

Do not test only the happy path. Use controlled test records and clearly mark them as TEST so they can be removed from reporting.

12.1 Core test cases

ID	Scenario	Input/action	Expected result
T01	Valid A lead	High lead volume, larger team, weak process, immediate timeline	Grade A; result email; owner alert; Loom task
T02	Valid B lead	Medium team/volume, some gaps, 90-day timeline	Grade B; result email; follow-up scheduled
T03	Valid C lead	Solo, low volume, researching	Grade C; educational email; no A alert
T04	Duplicate email	Submit same email twice	One lead record; updated activity; no duplicate UUID
T05	Duplicate company, new contact	Different email, same domain	Do not merge blindly; flag possible account relationship
T06	Missing required field	No email/company/consent	Rejected safely; no sales email
T07	Invalid email	Bad format	Marked invalid; error/activity logged
T08	Suppressed email	Email exists in suppression list	No message sent; event logged
T09	Email send failure	Force credential/provider error	Error logged; safe retry; no duplicate after recovery

ID	Scenario	Input/action	Expected result
T10	Booking received	Book using test email	Status Call booked; sequence stops; owner notified
T11	Positive reply	Reply from test mailbox	Reply classified; follow-ups stop; owner task
T12	Unsubscribe	Reply with unsubscribe request	Suppressed immediately; no future messages
T13	Out of office	Automatic reply	Classified OOO; no sales-owner false alarm
T14	AI invalid JSON	Force malformed model output	Deterministic fallback email sends
T15	Workflow retry	Re-run same execution/input	Idempotent; no duplicate email/activity where prohibited
T16	Timezone	Lead books in another timezone	UTC stored; correct local display shown
T17	Form version change	Add/change field	Old and new version remain traceable
T18	Dashboard reconciliation	Compare raw leads and metrics	Counts and revenue match source records

12.2 Production acceptance checklist

- ☐ Production form URL is correct and branded.
- ☐ Production webhook is active and protected appropriately.
- ☐ Credentials use the correct production accounts.
- ☐ No test email addresses remain in recipient fields.
- ☐ Config values are loaded from one source.
- ☐ Scores match manual calculations for A, B and C tests.
- ☐ Duplicate and suppression logic passes.
- ☐ Every email includes accurate sender identity and opt-out handling.
- ☐ Reply and booking stop conditions pass.
- ☐ Error workflow is active.
- ☐ Dashboard excludes test records.
- ☐ The owner has access to all links and credentials are documented securely.
- ☐ A Loom handover explains architecture, workflows and troubleshooting.

12.3 Monitoring after launch

- Check executions after the first real submission.
- Review all failed executions daily during the launch period.
- Compare submission count with lead rows and result emails sent.
- Check spam/bounce complaints and sender health.
- Review whether A-grade thresholds are producing genuinely useful leads.
- Adjust copy and scoring only through a versioned change.

13. Privacy, Deliverability and Safety

- Collect only information needed for the audit and sales follow-up.
- Explain that the prospect will receive their result and relevant follow-up.
- Honor unsubscribe and do-not-contact requests immediately.
- Keep a suppression list that is checked before every automated send.
- Use a professional sending account with configured domain authentication.
- Do not send large attachments in the first message; use secure links.
- Do not expose scores, internal notes or CRM identifiers in public URLs.
- Do not store credentials inside Code nodes or plain-text sheets.
- Limit access to the lead database and remove former team members promptly.
- Apply applicable privacy and marketing laws for each target geography; ask management for legal review when needed.
- Avoid making guaranteed revenue or performance claims.
- Use prospect-local business hours for scheduled communications where timezone is known.

13.1 Idempotency rules

- Use lead_id plus event type plus sequence step as an idempotency key for outbound messages.
- Upsert leads; append activities.
- Do not generate a new lead_id on an update.
- Before sending, check whether the same template/step was already successfully sent.
- A failed send may be retried; a successful send must not be repeated automatically.

13.2 Credential checklist

- ☐ Form/webhook access
- ☐ Google Sheets or CRM credential
- ☐ Email sender credential
- ☐ Booking webhook/API credential
- ☐ Internal notification credential
- ☐ OpenAI credential if AI is enabled
- ☐ n8n environment variables and encryption key policy
- ☐ Backup/export access

13.3 Error severity

Severity	Examples	Response
Critical	Form submissions lost; scoring unavailable; widespread result-email failure	Notify immediately; pause traffic if needed; fix and reconcile all affected records.
High	A-level alerts failing; booking/reply stop conditions failing	Fix same day; manually review affected leads.
Medium	Dashboard delay; one template formatting issue	Log, correct and verify.
Low	Non-blocking copy or cosmetic issue	Add to improvement backlog.

14. Launch SOP

14.1 Pre-launch

- ☐ Owner approves offer name, landing copy, questions and email templates.
- ☐ Complete all A/B/C test submissions.
- ☐ Verify booking link and calendar availability.
- ☐ Create management dashboard and daily summary schedule.
- ☐ Prepare LinkedIn/Facebook post and direct-message scripts.
- ☐ Confirm who handles A leads and the response SLA.
- ☐ Take a backup/export of workflows and sheet structure.

14.2 Launch day

1. Activate production workflows.
2. Submit one final production test using a controlled email.
3. Publish the lead magnet from the owner profile.
4. Send the form only to interested contacts or approved audiences.
5. Monitor executions and lead rows in real time for early submissions.
6. Personally check the first five result emails.
7. Notify the sales owner immediately when the first A lead appears.
8. Send the end-of-day dashboard summary and issue report.

14.3 First-week optimization

Question	Decision
Are people opening but not submitting?	Shorten the form or improve the value explanation.
Are there many C leads?	Improve targeting and outreach rather than only changing scoring.
Are A leads not booking?	Improve result email, Loom quality and call-to-action.
Are prospects confused by questions?	Rewrite in non-technical language.
Are result emails too generic?	Improve deterministic recommendation mapping or verified AI summary.
Are team actions overdue?	Strengthen alerts, owner assignment and daily accountability.

14.4 Initial performance targets

These are operating targets, not guaranteed outcomes.

Metric	Initial target
Relevant prospects researched	300 in the first week
Personalized LinkedIn connections/messages	200-300

Metric	Initial target
Assessment completions	15-30
A-level leads	3-8
Personalized Loom reviews	3-5
Calls booked	2-6
Proposals	1-3
Monthly signed-work target	At least USD 10,000

15. Handover Requirements

The system is not considered complete until another trained person can understand and operate it.

15.1 Files and links to provide

- ☐ Production form and landing-page link.
- ☐ Master lead database/dashboard link.
- ☐ Booking link.
- ☐ All n8n workflow links and exported JSON backups.
- ☐ Credential ownership list without exposing secret values in the document.
- ☐ Config values and explanation.
- ☐ Template library.
- ☐ Test evidence and acceptance checklist.
- ☐ Known limitations and future backlog.
- ☐ Loom walkthrough.

15.2 Loom handover outline

1. Explain the business goal and complete funnel.
2. Show the public assessment and hidden tracking fields.
3. Show Leads, Activity_Log, Config, Dashboard, Errors and Suppression_List.
4. Walk through WF-01 node by node.
5. Explain both scores and grade thresholds.
6. Show result delivery, A-lead alert and next-action creation.
7. Show reply/booking stop conditions.
8. Show the error workflow and how to safely rerun a failed execution.
9. Show the dashboard and daily summary.
10. Explain how to change copy, thresholds and booking URL without breaking workflows.

15.3 Final acceptance evidence

Evidence	Required
A, B and C test lead records	Yes

Evidence	Required
Result emails for all grades	Yes
A-level owner alert	Yes
Booking stop-condition test	Yes
Reply/unsubscribe test	Yes
Duplicate submission test	Yes
Error and retry test	Yes
Dashboard screenshot	Yes
Workflow exports	Yes
Handover Loom	Yes

15.4 Future enhancement backlog

- Custom branded result page and downloadable PDF.
- AI-assisted website research for A leads with human verification.
- Automatic Loom outline generation.
- Full HubSpot/GHL/Airtable CRM migration.
- LinkedIn Lead Gen Form and Meta Instant Form integrations.
- Paid-ad attribution and cost per qualified lead.
- Lead-account model for multiple contacts from one company.
- Industry-specific scorecards for clinics, agencies and home-service companies.
- Proposal-generation workflow after completed calls.
- Revenue forecasting and cohort analysis.

Appendix A - Quick Implementation Checklist

-
- ☐ Create form and exact fields.
 - ☐ Create hidden UTM/source fields.
 - ☐ Create Leads, Activity_Log, Config, Email_Templates, Campaigns, Dashboard, Errors and Suppression_List tabs.
 - ☐ Build WF-01 intake and scoring.
 - ☐ Validate email, consent and required fields.
 - ☐ Implement suppression and duplicate checks.
 - ☐ Calculate both scores and grade.
 - ☐ Upsert lead and append activity.
 - ☐ Build result email for A, B and C.
 - ☐ Build A-level internal alert and task.
 - ☐ Build follow-up scheduler with stop conditions.
 - ☐ Build booking sync.
 - ☐ Build reply classification and unsubscribe handling.
 - ☐ Build daily dashboard summary.

- ☐ Build error workflow.
- ☐ Run all tests.
- ☐ Export workflows and record Loom.
- ☐ Launch and monitor first real submissions.

Appendix B - Node Naming Standard

Type	Example
Trigger	TRG - Form Submission
Set/Edit Fields	SET - Normalize Input
IF	IF - Required Fields Valid?
Switch	SWT - Route by Lead Grade
Code	CODE - Calculate Scores
Google Sheets	GS - Upsert Lead
Email	MAIL - Send A Result
Execute Workflow	EXEC - Result Delivery
Merge	MRG - Combine Lead and Config
Wait/Schedule	WAIT - Follow-Up 1 Due
Error	ERR - Log Failure

Appendix C - Non-Technical Explanation for Sales Team

The assessment checks how a real estate company receives and manages new inquiries. The automation gives each company two separate results:

- System Health Score: How organized and automated their current lead process appears.
- Qualification Grade: Whether the company appears large enough, active enough and ready enough for a serious project.

A company can have a very weak system but still be a poor buyer. It can also have a reasonably good system but be a strong buyer looking for optimization. This is why the sales team must read the grade, business details and main problem together.

Appendix D - Owner Review Checklist for an A Lead

- ☐ Open website and understand services.
- ☐ Review contact forms, booking, phone, chat and lead channels.
- ☐ Review team page and locations.
- ☐ Review CRM/system clues without inventing facts.
- ☐ Identify one main process problem.
- ☐ Record a 3-5 minute Loom.
- ☐ Ask one technical qualification question.
- ☐ Offer two call times or the booking link.

- ☐ Update CRM next action.
- ☐ Prepare a three-option proposal after discovery when appropriate.

Final instruction to the automation owner

Build for reliability, visibility and conversion. A workflow is not complete because the nodes turn green; it is complete when the right prospect receives value, the sales owner receives the right action, and no qualified opportunity is lost.

Implementation Sign-Off and Launch Approval

Complete this page during handover. Production launch is approved only after the required evidence has been reviewed.

Approval item	Owner / value	Status / date
Automation owner	_____	_____
Sales owner	_____	_____
Production form URL	_____	Verified: Yes / No
Master database/dashboard	_____	Verified: Yes / No
n8n production workflows	_____	Active: Yes / No
A/B/C test evidence	Location: _____	Passed: Yes / No
Reply/booking/unsubscribe tests	Location: _____	Passed: Yes / No
Error workflow and backup	Location: _____	Verified: Yes / No
Handover Loom	Link: _____	Reviewed: Yes / No
Production launch decision	APPROVED / NOT APPROVED	Date: _____

Post-Launch Review

Review point	Record
First real submission verified	Date/time: _____
First A-level lead handled	Lead/company: _____
First daily management report received	Date: _____
Issues found during first 48 hours	_____ _____
Next optimization decision	_____ _____
